

# Community Impact and Social Accountability (CISA)

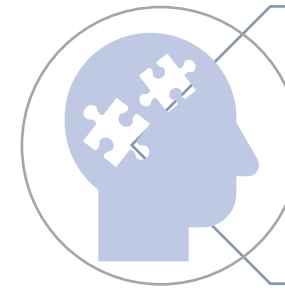

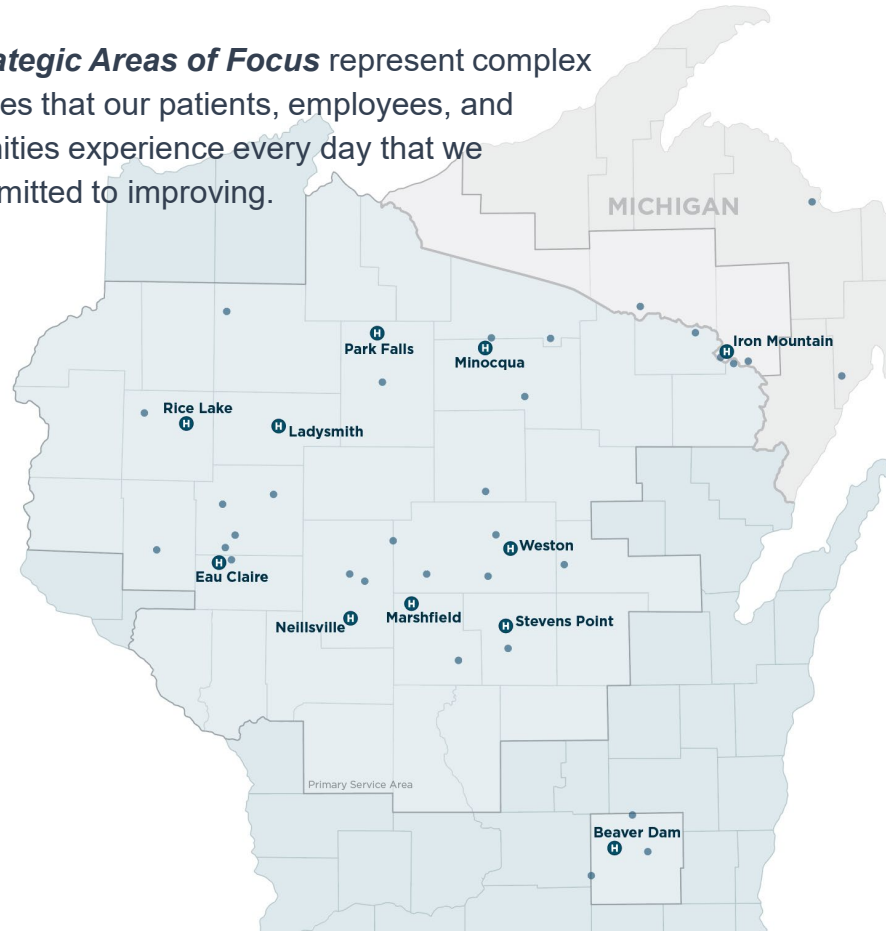

# STRATEGIC AREAS OF FOCUS 2024-27

As an **anchor institution** in the communities we are honored to serve, Marshfield Clinic Health System believes that we have a moral and corporate responsibility and obligation to address the health and social needs of historically marginalized and under-resourced communities.

**Our mission is: *We Enrich Lives ... to create healthy communities.***

We live our mission through collective impact, collaborative partnerships, and innovation to address policy, system and environmental health disparities that advance health equity, especially in rural communities.

The **Strategic Areas of Focus** represent complex challenges that our patients, employees, and communities experience every day that we are committed to improving.

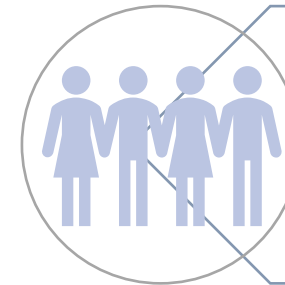

## Behavioral Health

Rural communities face many challenges to behavioral health including access, availability, affordability, and acceptability.

## Community Capacity, Engagement and Infrastructure

Rural communities face serious social, economic and health challenges.

## Health Equity

Health inequities in rural communities are numerous and vary by region including transportation, food insecurity, and many other health related social needs.

## Substance Use

Substance use can be especially hard to combat in rural communities due to limited resources for prevention, treatment and recovery.

Marshfield Clinic Health System

Caring for Communities
